

DESIGN SERVICES

FROM A SKETCH TO A FINAL DRAFT

Our design department comprises of architects, constructors and structural engineers. We are able to cover a whole range of design services from the first concept of participation on an exhibition through to the final design of display, manufacturing drawings, static surveys and approval from a trade-fair committee.

We can also produce a proposal of graphic surfaces for any display, take care of an approval process of complex exhibitions of your trade-fair or provide construction supervision.
